## About This Guide

---

All businesses, large or small, like to save tax and there are many simple steps that a business can take to achieve this aim.

This guide contains 101 tax savings tips aimed at entrepreneurs. The tips follow the lifecycle of a business meaning that there is something for everyone, regardless of whether you are thinking of starting a business, a new start-up or an established business. Many of the tips apply equally to sole traders, partnerships and companies, whereas some are specific to a particular type of business.

However, it should be noted that tips in this guide are for illustration purposes only and are intended to demonstrate where tax savings can be made. The savings that can be made will depend on the precise circumstances and the examples are a guide only. Professional advice should always be sought.

## **Chapter 1.**

### **Business Structure**

1. Choose The Right Structure For Your Business
2. Choose Which Taxes You Pay
3. Take Advantage Of The Veil Of Incorporation
4. Save Incorporation Costs
5. Create Different Categories Of Shares In A Limited Company
6. Keep Administration Costs Low
7. Keep All Business Profits For Yourself
8. Maximise The Skill Base
9. Agree The Split Of Partnership Profits And Losses
10. Consider Purchasing An Existing Business
11. Run A Franchise

## **1. Choose The Right Structure For Your Business**

---

There are various ways in which businesses can be structured, and it is important that the structure that is chosen is the right one for the business.

There are four main options:

- sole trader;
- partnership;
- limited liability partnership; and
- limited company.

The choice of business vehicle affects the type of taxes you pay, your liability for business debts and the legal and administrative requirements imposed on the business. It will also affect the way in which business decisions are made and the sources of finance available to the business.

In deciding on the right structure for the business, it is necessary to take account of all relevant factors and also your attitude to risk.

For example, a sole trader is the simplest set-up and the proprietor gets to keep all of the profits. However, he or she is also liable for all of the business debts. The sole trader is taxed on his total income after deducting his personal allowances – the profits of the business are not taxed separately but form part of the sole trader's taxable income, together with income from other sources, such as any employment or investment income. A sole trader must also pay Class 2 and Class 4 National Insurance contributions if profits exceed the relevant trigger thresholds.

A limited company is more complicated to set up and administer, but the shareholders' liability is limited to the amount of capital that they own – a major plus. The company is taxed in its own right, and any profits that are extracted from the company will be taxed on the recipients. The tax

position of the company is separate from that of the individual shareholders. The company must file annual accounts and an annual confirmation statement at Companies House. Being a director of a limited company also confers certain statutory duties.

### Choose The Right Structure For Your Business

Bill wants to set up his own business. He has some money to invest but does not want to risk losing his family home if the business fails.

He is also keen to present a professional image to potential customers to help him win new business.

Having considered all the factors, Bill decides that a limited company is the right vehicle for his business. Limited liability is very important to him and he is prepared to undertake the additional administrative burden associated with a limited company in return for this.

## 2. Choose Which Taxes You Pay

---

The choice of business vehicle will also determine which taxes are paid by your business. Sole traders and partnerships pay income tax on their profits and Class 2 and Class 4 National Insurance contributions, whereas a limited company pays corporation tax. However, there may also be income tax to pay on profits extracted from a limited company and where those profits are extracted in the form of a salary or bonus, Class 1 NICs.

The profits from a sole trader's business and a partner's share of partnership profits are taken into account in working out his or her overall income tax liability, together with income from other sources, such as any employment income, taxable interest, and dividend income. Personal allowances are available to reduce the amount on which tax is charged. To the extent that business profits exceed the proprietor's personal allowance, they are taxed at 20%, 40% or 45% for taxpayers in the UK excluding Scotland (the Scottish rates of income tax apply to Scottish taxpayers). By contrast, the taxable profits of a company are taxed at the corporation tax rate of 19% (financial years 2021 and 2022). Profits extracted from the company as salary or bonus are liable to income tax and also Class 1 National Insurance contributions. However, salary and bonus payments and the associated employer's National Insurance are deductible in computing profits chargeable to corporation tax. There is no corporation tax deduction for dividends, which must be paid out of retained profits, but in the hands of the shareholder, they are tax-free to the extent that the dividend allowance is available and otherwise taxed at the relevant dividend rate of tax.

Gains realised by individuals are liable to capital gains tax, whereas a company pays corporation tax on chargeable gains.

All businesses with turnover of VATable goods and services above the VAT registration threshold, currently £85,000, must register for VAT. VAT-registered businesses with turnover above the VAT registration threshold of £85,000 must comply with the requirements of Making Tax Digital (MTD). Where the business is VAT registered but turnover is below this level, compliance with MTD for VAT is compulsory from the start of the first VAT accounting period beginning on or after 1 April 2022.

A sole trader and an individual partner in a partnership are self-employed and pay both Class 2 flat rate National Insurance contributions and Class 4 contributions on their profits if their profits exceed the relevant profit thresholds. The payment of Class 2 National Insurance contributions builds up entitlement to the state pension and certain contributory benefits.

Companies do not pay National Insurance on their profits but must pay employer contributions on payments of earnings made to employees.

By choosing the structure for your business, it is also possible to choose which taxes you pay – the taxes that are paid vary depending on the structure of the business.

It is important when choosing a structure to consider not only the current rates of tax, but also any future changes where these are known. The personal allowance is to be frozen at £12,570 until April 2026, and the basic rate band is to remain at £37,700 for the same time period. The rate of corporation tax for companies with taxable profits in excess of the lower limit (£50,000 as divided by the number of associated companies plus 1) will increase to 25% from 1 April 2023, with marginal relief reducing the effective rate where profits are between the lower limit and the upper limit (£250,000 as divided by the number of associated companies plus 1). Companies with profits not exceeding the lower limit will pay the small profits rates of 19%. These limits are proportionately reduced for accounting periods of less than 12 months.

### Choose Which Taxes You Pay

Richard wants to set up a business. Having considered the options, he decides that being a sole trader is the right decision for him.

Richard will pay income tax on any profits from his business. His income tax liability will depend on his total income from all sources.

He will pay capital gains tax on any capital gains made from the sale of business assets, etc. where his net chargeable gains for the tax year exceed the annual exempt amount.

He will also pay flat rate Class 2 National Insurance contributions and Class 4 contributions on his profits where his profits exceed the relevant thresholds.

If his turnover exceeds the VAT registration threshold, he must also register for VAT. If his turnover is below this level, he can register voluntarily as this will allow him to recover any VAT suffered, although he must also charge VAT on any VATable supplies that he makes.
